Bilateral Meetings

- (11a.m. – 1p.m.)

Description

We have had a good idea and have been guided by the fact that no adequate business software can be found in the global market which could provide agriculture sector with appropriate management of complex production processing aiming at increase in yields, revenues and reduction of total operating costs and expenses. That is why we have established Greensoft company in January 2012 and started to bring the idea into reality. We have developed software solutions specialized for managing agriculture production processes and all types of lands based on GIS technology. These are copyright software solutions “**AgroLIFE Government**” and “**AgroLIFE Enterprise**” registered with the Serbian Patent Institute (The Republic of Serbia Intellectual Property Office). We are proud of have household owners, agronomists and public authorities as users, satisfied with the quality and functions of our products. Our users are provided with efficient and optimum way of planning and running entire agro-business when using AgroLIFE Government and AgroLIFE Enterprise software in every day’s operations which makes us have our **MISSION** accomplished.

Since 2014, as a member of TeleGroup system, our **VISION** has been to place the existing group of IT products dedicated for agro-business on the global market and to create new products for the intelligent agriculture and water resources management.
